

TIC Software Navigator

Analyze. Understand. Modernize.

TIC Software Navigator is an AI-powered solution that extracts information from complex COBOL, TAL, C/C++, and TACL code into a searchable, interactive knowledge base. **It can be used to produce business logic, code explanation, and diagrams for documentation purposes.** In addition, TIC Navigator enables chat interface to answer any adhoc questions about the programs stored in the knowledgebase.

Use Case

- Preserve decades of business logic before expert retirement.
- Create searchable documentation for faster issue resolution.
- Enable confident modernization and system updates.
- Accelerate new developer onboarding and knowledge transfer.

Business Impact

- Reduce resolution times from days to hours.
- Eliminate single points of failure in knowledge.
- Transform NonStop code into a competitive advantage.

Quick ROI

- Increase developers productivity by 50% or more.
- Get more tasks done in less time.
- Free up the valuable time of your Subject Matter Expert (SME).

NonStop users with Leading-Edge Technology

What it is: Centralize and manage your entire portfolio of application programs in a structured AI-ready repository.

What it does: Automatically summarizes and indexes, making them instantly accessible for high-level review and future AI-based queries.

Business Rule Extraction

Uncover hidden logic with AI.

NonStop System Focus

Deep expertise in COBOL/TAL, HPE NonStop ecosystems

Interactive Visualizations

Rich, contextual views seamlessly connects historical and operational metadata.

Developer Onboarding

Accelerates learning with intelligent knowledge transfer.
