

# TELEFAX

Send information from your NonStop Server applications to remote fax machines virtually anywhere in the world

TeleFax is a part of the TIC Data.Flow product suite

## Fax-Enable your Application Today!

**TeleFax** enables you to send faxes, automatically or on demand, from any application to any fax machine virtually anywhere in the world.

Medical labs use it to report test results, banks use it to confirm cash transfers, hotels use it to confirm reservations made by travel agents and consumer credit companies use it to report the results of credit checks

They all get one enormous strategic benefit from TeleFax: the ability to send information around the world, faster and more accurately than ever before- in most cases, much faster than their competition.

### Some benefits of using TeleFax over other products :

#### Guardian-based Solution

TeleFax automatically sends data from any NonStop Server to a remote Group III fax machine.

TeleFax consists of NonStop Server based software that works in conjunction with a fax Server Unit with embedded UNIX-based or NT-based software.

#### High Performance

TeleFax is fast and scalable. You can increase the number of TeleFax modules or fax ports to accommodate your growing fax needs without any changes to your application.

#### Proven

Customers have come to depend on TeleFax since 1988. Using TeleFax is as simple as sending data to a local printer. It is a proven reliable product that has served many large corporations.

#### Support

Customers count on TIC support to give them quick responses to their questions and requests. When you need answers, TIC support is there to help you.

#### Some of our Customers :

### Key Features

- **Labor Saving**  
No standing in line, no filling out coversheets, no feeding pages into a fax machine. TeleFax does it all.
- **Cost Saving**  
Telefax can schedule transmissions when rates are best and can track usage to control costs.
- **Easy to install and to use.**  
It's the closest thing to a truly plug-and-play application in the mainframe world.
- **Quality Output**  
Recipients will get sharp, crisp faxes from your TeleFax system.
- **Rich in Features**  
Supports Text, PCL and TIFF formats. Includes Logo, Signature, Letterhead and Forms. Landscape or Portrait modes. And more-- virtually anything you may need to make yours the most professional looking and high quality fax.
